

CLIFFS MOUNTAIN HOUSE

Merit Award – Small Projects Category
Johnston Design Group, LLC

This sustainable showcase home connects with the land by featuring access to the outdoors, integration with the landscape, natural ventilation and lighting, and the use of local materials. Green design strategies specifically developed by the architect for this developer of mountain communities are featured throughout the home, including solar thermal energy technology and an emphasis on locally available, responsibly-harvested and produced, renewable green building materials and construction methods. The green design standard extends into the landscape with an emphasis on tree preservation, restoration of native plant communities, enhancement of wildlife habitat, and responsible care of rain water resources.
